

Synopsis Evaluation

Candidate: Waqas Zafar

Registration Number: FA18-BCS-107

Supervisor: Dr. Nadeem Javaid

Dated: Mar 18, 2022

Synopsis Title: Efficient Electricity Theft Detection in Smart Grids using Data Driven Models

After in depth examination of the manuscript following are the recommendations of the GAC member(s)

Dr. Assad Abbas

Recommendation: Minor Changings **Is Required Again:** No

Comment:

The problem statement focuses on class imbalance, dimension reduction. These are generic issues. Rather the candidate should focus on the limitations of the techniques in literature. The manuscript is written in a bit informal way. For example in the sentence "Therefore, ETD is an important thing and needs immediate attention to avoid ever-increasing electricity theft rate. Keeping this" avoid using the words like "thing" etc. Comparisons should be done with the relevant baseline techniques rather than any arbitrary techniques. Discussion on handling the identical issues should be in a way such that they are aligned with the objectives of the proposed research.

Dr. Basit Raza

Recommendation: Major Changings **Is Required Again:** Yes

Comment:

It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using "Content here, content here", making it look like readable English. Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for "lorem ipsum" will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like).
